MUSA (MUMBAI UNIVERSITY STUDENTS ASSOCIATION)

QUESTION BANK OF INFORMATION RETREIVAL SYSTEM

B.E SEM-VII **SCHEME: R-19 C SCHEME** **FOR WINTER SESSION 2026**

BRANCH: IT **BATCH: REGULAR**

Q.1) Explain Relevance Feedback. Discuss the contribution of relevance feedback for quality IR.

Q.2) Explain the taxonomy of Information retrieval model with classification diagram.

Q.3) Discuss automatic local analysis, with suitable examples.

Q.4) Write different issues for modeling natural language and find solution for it.

Q.5) Discuss Huffman algorithm in detail with suitable example.

Q.6) Explain Object Oriented and Object Relational DBMS.

Q.7) What is the significance of tf and idf? How can you calculate tf and idf in a vector model?

Q.8) What is the starting point? Explain list of collections and overviews in detail.

Q.9) Summarize various visualization techniques with respect to user interface design.

Q.10) What is human-computer interaction? List and discuss any four design principles for information access interfaces.

Q.11) Explain probabilistic retrieval model. Compare and contrast belief network model and interference network model.

Q.12) Explain Multimedia information retrieval. Discuss indexing and searching.

Q.13) What is the purpose of using keyword based query? Briefly explain any 3 types of keyword based queries.

Q.14) Discuss various phases of text preprocessing within a document. Discuss any one application for the same.

Q.15) Describe the process of creating an inverted index with an example. How can this process be optimized using block addressing?

Q.16) State the different types of queries. Explain the pattern matching query concept with an example.

Q.17) Explain ranking and similarity measures with suitable example.

Q.18) Discuss sequential searching. Explain any one algorithm used in sequential searching.

Q.19) Explain search engine Architecture. How does search engine retrieves the information? What is the purpose of a search engine? List the steps of search operation by search engine.

Q.20) Explain the Retrieval Process with neat labelled diagram. Discuss the objectives of IRS.

Q.21) Describe meta searchers and it merits with example. Explain the Importance of metadata and its types.

Q.22) Define data modeling? Explain various types of data models.

Q.23) Define NLP with features and application.

Q.23) Differentiate between the following:

Q.22) Define data modeling? Explain various types of data models.

Q.23) Define NLP with features and application.

Q.23) Differentiate between the following:

i) Information vs Data retrieval
ii) Proximity Queries and Wildcard Queries
iii) model and vector model

Q.24) Write a short note on:

i) Different types of Information system.
ii) Different markup language and its application
iii) Document clustering
iv) Interface support for the search process
v) Scalar and metrics cluster
vi) Information Retrieval in digital libraries

Numerical

Q.1) Apply vector model to rank the above documents.

Q.2) Apply Boyer Moore algorithm to construct bad match table and find the index of the given pattern string.

*******ALL THE BEST*******
